<b>Description:</b> Pipeline Integrity will be performing a robotic in-line inspection and two direct examinations (one at the north end of the line and the second at the south end of the line) in Vernon, CA. The robotic inspection will examine approximately 0.04 miles of 10" pipe. A stopple will be installed on the line for the robotic tool to be launched and received from. The proposed stopple location is on the City of Vernon Water Department Property. Construction work to excavate (within the station), install the stopple, and complete the internal inspection of the line will be day work. Construction work in the street (for the south direct examination) is planned as night work. The excavation and the direct examination of the line (in the street) will not occur consecutively (approx. 3 weeks apart). Traffic control will only be implemented during south direct examination construction and inspection. In addition, the fence between the station and the City of Vernon Water Department will be removed during construction however will be replaced once construction is complete. Potholing to determine the depth of the pipeline will be required. • A TRE is needed for equipment storage, parking, and construction staging (location attached). We will continue to work with the County Fire Department if training is planned during our construction.
